FINANCIAL DECISION BRIEF

Atlanta Braves Holdings

FY2023-FY2025 annual results | H1 2026 interim update

REVENUE GREW. OPERATING CASH GENERATION DETERIORATED.

The H1 2026 decline was concentrated in Baseball operations. The first decision is not where to expand; it is how to validate cash requirements and broadcasting contribution before new discretionary capital commitments.

H1 2026 REVENUE	ADJUSTED OIBDA	OPERATING CASH FLOW	SIMPLIFIED NET DEBT
$377.13M	**-$5.77M**	**-$1.65M**	**$676.85M**
+$17.48M year over year	-$42.92M year over year	-$89.29M year over year	Excludes finance leases

WHERE PERFORMANCE CHANGED

Adjusted OIBDA change, H1 2026 vs H1 2025

MANAGEMENT PRIORITY

Rebuild cash-flow visibility and test BravesVision unit economics before approving discretionary expansion. Preserve sporting operations while distinguishing committed costs from controllable spending.

PROPOSED MANAGEMENT ACTIONS

01 LIQUIDITY	Implement a rolling 13-week cash forecast; reconcile restricted cash, debt maturities and borrowing capacity.
02 BROADCASTING	Isolate recurring production costs; track incremental media revenue, contribution margin, acquisition cost and retention.
03 CAPITAL ALLOCATION	Require cash-return and sensitivity analysis for property investments and other discretionary projects.

INTERPRETATION

Debt covenants were reported compliant at June 30, 2026. Negative H1 cash flow and working capital are monitoring priorities, not evidence of imminent distress.

INVESTMENT REVIEW

Decision gates & sensitivity

H1 2026 historical baseline | Scenario values are illustrative, not forecasts

OPERATING SCENARIOS

Pro forma H1 adjusted OIBDA (USD millions)

CASE	INCREMENTAL CONTRIBUTION	OIBDA	STATUS
Actual H1 2026	-	**-5.77**	Loss
Conservative	1.20	**-4.57**	Below zero
Base	6.80	**1.03**	Breakeven
Upside	13.50	**7.73**	Breakeven

BASE-CASE DOWNSIDE

If media revenue is 20% lower AND the media contribution margin is 40% rather than 55%, the modeled +$1.03M surplus becomes a -$0.35M deficit.

FINANCIAL GUARDRAILS AND KPI OWNERS

Finance / Treasury	13-week forecast variance; unrestricted liquidity; refinancing and covenant headroom.
Media / Commercial	Incremental contribution and acquisition economics; transition vs recurring expenses.
Operations / Baseball	Committed vs controllable costs; cost variances with competitive impact.
Real estate / Capital	Property-level operating cash returns, capex commitments, risk-adjusted return.

LIMITS AND ANALYTICAL BASIS

- No access to management budgets, internal subscriber economics, restricted-cash terms or property-level capital returns.
- Operating cash flow and simple cash-after-capex are not interchangeable with Adjusted OIBDA or unlevered free cash flow.
- Comparing matching six-month periods reduces but does not eliminate seasonality and working-capital timing effects.
- Numbers were transcribed from public filings; the notebook validates arithmetic but does not automate SEC extraction.
